

The `xepersian-hm` package

Fixing kashida in xepersian

Hossein Movahhedian*

Released 2020-03-17

Kashida feature in xepersian has problem with some fonts such as HM Series fonts available at <https://dma8hm1334.bitbucket.io> and X Series 2 fonts available at http://wiki.irmug.com/index.php/X_Series_2. The xepersian-hm package fixes this problem.

The file `texmf-dist/doc/xelatex/xepersian-hm/test-kashida.tex` can be used as a simple example of the usage of the package.

Any comments or suggestions would be gratefully appreciated. Please report any bug or issue to dma8hm1334@gmail.com.

I will do my best to fix all the bugs you report, but, unfortunately, time is a big hurdle to overcome; so, my apologies in advance for those which I cannot make time to fix.

Please note that xepersian-hm loads xepersian automatically, so you may only pass options to the package using the command `\PassOptionsToPackage` before `\documentclass`, for example:

```
\PassOptionsToPackage{Kashida=off,RTLdocument=on}{xepersian}
\documentclass{report}
\usepackage{xcolor}
\usepackage[Kashida,kashidastretch=0.14 em plus 0.5 em]{xepersian-hm}
```

The options available in xepersian-hm are:

- **Kashida:** with two possible values, `on` which enables Kashida feature and `off` which disables that feature. For example `Kashida=on` enables Kashida feature.
- **kashidastretch:** which specifies the amount of extra stretching for some combinations of characters. You may strictly specify the value of this option. For example '`kashidastretch=0.14 em plus 0.5 em`' or you may use the default values. The available default values are:
