MUSIXFLX(1) MUSIXFLX(1)

NAME

musixflx – process mx1 files (the second pass of 3-pass MusiXTeX typesetting)

SYNOPSIS

```
[texlua] musixflx[.lua] jobname [.mx1 | .tex] [debugmode]
```

where debugmode can be

- d output debugging information to the screen
- m output line numbers to the screen
- f output debugging information to jobname.mxl (not mx1)
- s output computed lines to the screen

To allow for ease of use with a batch file, **musixflx.lua** can be fed with either *jobname.mx1*, *jobname.tex*, or just *jobname*, any of which open *jobname.mx1* and create *jobname.mx2*.
