

NAME

`cefconv` – convert a TeX document containing CEF macros into ‘preprocessed’ form.

SYNOPSIS

`cefconv <infile> >outfile`

DESCRIPTION

The **Chinese Encoding Framework (CEF)** developed by Christian Wittern <cwittern@con-line.central.de> makes it possible to include CJK characters in various encodings using the SGML macros **&CX-aabb;** for Big 5 and CNS encoding and **&U-aabb;** for Unicode (**X** denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. **aabb** is either a decimal or hexadecimal number)

`cefconv` converts the CEF macros into a form which can directly processed with $\text{\LaTeX} 2_{\epsilon}$.

This filter is part of the **CJK** macro package for $\text{\LaTeX} 2_{\epsilon}$.
