NAME

bibtex – make a bibliography for (La)TeX

SYNOPSIS

bibtex [-min-crossrefs=number] [-terse] auxname[.aux]

DESCRIPTION

This manual page is not meant to be exhaustive. The complete documentation for this version of T_EX can be found in the info file or manual *Web2C: A TeX implementation*.

BIBTEX reads the top-level auxiliary (.aux) file auxname that was output during the running of latex(1) or tex(1) and creates a bibliography (.bbl) file that will be incorporated into the document on subsequent runs of LATEX or TEX.

BIBTEX looks up, in bibliographic database (.bib) files specified by the \bibliography command, the entries specified by the \cite and \nocite commands in the LATEX or TEX source file. It formats the information from those entries according to instructions in a bibliography style (.bst) file (specified by the \bibliographystyle command, and it outputs the results to the .bbl file.

The LATEX manual explains what a LATEX source file must contain to work with BIBTEX. Appendix B of the manual describes the format of the .bib files. The 'BIBTEXing' document describes extensions and details of this format, and it gives other useful hints for using BIBTEX.

OPTIONS

The **-min-crossrefs** option defines the minimum number of **crossref** required for automatic inclusion of the crossref'd entry on the citation list; the default is two. With the **-terse** option, BIBTEX operates silently. Without it, a banner and progress reports are printed on *stdout*.

ENVIRONMENT

BIBT_EX searches the directories in the path defined by the BSTINPUTS environment variable for **.bst** files. If BSTINPUTS is not set, it uses the system default. For **.bib** files, it uses the BIBIN-PUTS environment variable if that is set, otherwise the default. See **tex**(1) for the details of the searching.

If the environment variable TEXMFOUTPUT is set, BIBT_EX attempts to put its output files in it, if they cannot be put in the current directory. Again, see **tex**(1). No special searching is done for the **.aux** file.

FILES

```
*.bst Bibliography style files.
```

btxdoc.tex

"BIBTEXing" – LATEXable documentation for general BIBTEX users

btxhak.tex

"Designing BIBTEX Styles" – LATEXable documentation for style designers

btxdoc.bib

database file for those two documents

xampl.bib

database file giving examples of all standard entry types

btxbst.doc

template file and documentation for the standard styles

All those files should be available somewhere on your system.

The host math.utah.edu has a vast collection of **.bib** files available for anonymous ftp, including references for all the standard T_FX books and a complete bibliography for TUGboat.

SEE ALSO

latex(1), tex(1).

AUTHOR

Oren Patashnik, Stanford University. This man page describes the web2c version of BIBTEX. Other ports of BIBTEX, such as Donald Knuth's version using the Sun Pascal compiler, do not have the same path searching implementation, or the command-line options.
