NAME

cefconv - convert a TeX document containing CEF macros into 'preprocessed' form.

SYNOPSIS

cefconv < *infile* > *outfile*

DESCRIPTION

The Chinese Encoding Framework (CEF) developed by Christian Wittern <cwittern@conline.central.de> makes it possible to include CJK characters in various encodings using the SGML macros &CX-aabb; for Big 5 and CNS encoding and &U-aabb; for Unicode (X denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. aabb is either a decimal or hexadecimal number)

cefconv converts the CEF macros into a form which can directly processed with $L^{AT}EX 2_{\varepsilon}$

This filter is part of the CJK macro package for $L^{AT}EX 2_{\mathcal{E}}$.
