

NAME

dosepsbin -- Extract PS/WMF/TIFF sections from DOS EPS binary files

VERSION

2011-12-05 v1.1

SYNOPSIS

The program **dosepsbin** analyses an EPS file that is not a plain ASCII PostScript file but given as DOS EPS binary file.

```
dosepsbin [options] <input file>
```

First it analyzes the *input file*, validates its header and summarizes the available sections. Depending on the given options, the sections are then written to files.

Options:

--eps-file <file>	Write PS section to <file>.
--wmf-file <file>	Write WMF section to <file>.
--tiff-file <file>	Write TIFF section to <file>.
--inputfile <file>	The name of the input file.
--verbose	Verbose output.
--quiet	Only errors and warnings are printed.
--help	Brief help message.
--man	Full documentation.
--version	Print version identification.

The files for output must be different from the input file.

DESCRIPTION

DOS EPS Binary File Format

A Encapsulated PostScript (EPS) file can also be given in a special binary format to support the inclusion of a thumbnail. The file format starts with a binary header that contains the positions of the possible sections:

- * Postscript (PS)
- * Windows Metafile Format (WMF)
- * Tag Image File Format (TIFF)

The PS section must be present and either the WMF file or the TIFF file should be given.

OPTIONS

--eps-file=<file>

The PS section is written to <file>. The output file must be different from the input file.

--wmf-file=<file>

The WMF section is written to <file> if present. The output file must be different from the input file.

--tiff-file=<file>

The TIFF section is written to <file> if present. The output file must be different from the input file.

--inputfile=<file>

The input file can also be given directly on the command line. If the file does not exist, then the file with extension '.eps' is tried.

---verbose

Verbose messages.

---quiet

No messages are printed except for errors and warnings.

---help

Display help screen.

---man

Prints manual page.

---version

Print version identification and exit.

EXAMPLES

The following command extracts the PS section from file *test.eps* and stores the result in file *test-ps.eps*:

```
dosepsbin --eps-file test-ps.eps test.eps
```
