

NAME

dvired – print dvi-files

SYNOPSIS

dvired [**options**] **file**

DESCRIPTION

dvired behaves like *dvips*, except for the fact that two logical pages are put onto each physical sheet of paper.

For *options*, see *dvips*(1). This program only interprets the following options:

-o file – redirect output into *file*.

-P printer – direct output to *printer*.

-f – direct output to stdout.

Any other option is passed directly to *dvips*.

EXAMPLES

It is assumed that the PRINTER-variable is set.

dvired -Plw foo – send output to printer *lw*.

dvired -o foo.ps foo – send output to file *foo.ps*.

dvired -pp4-7 foo – send 4 pages (reduced onto 2 sheets) of *foo* to the printer.

dvired foo -f | ghostview – – preview output with ghostview.

SEE ALSO

dvips(1)

BUGS

dvired is fixed on A4 paper size. If you want to use it with other paper, you have to change the settings within the source.
