

NAME

mktextmf – create a Metafont source file

SYNOPSIS

mktextmf *font*

DESCRIPTION

This manual page is not meant to be exhaustive. The complete documentation for this version of T_EX can be found in the info file or manual *Kpathsea: A library for path searching*.

mktextmf is used to generate the METAFONT source file for *font*, if possible. For example, *ecrm1200* or *cmr11*.

The name of the generated file is printed on standard output.

mktextmf is typically called by other programs, rather than from the command line.

OPTIONS

mktextmf accepts the following options:

--help Print help message and exit.

--version

Print version information and exit.

SEE ALSO

mktextpk(1), **mktextfm**(1).
