1 Commentary

This file is a dummy L^AT_EX package. The output of `acrotex-js` produces no document that is consumed by any L^AT_EX engine. At the time of first publication of this “package” distributes the JavaScript files `aeb.js` and `aeb_pro.js` (found in the `js-files` folder of this distribution) and provides documentation of how to install it, refer to `docs/install_jsfiles.pdf`.

Packages that require this JS files. The following is a list of packages that require the proper installation of the JS files provided by this package.

- `aeb.js`: Required by the `insdljs` package,¹ but for only for owners of the Acrobat application *and* who use the `dvips` -> Adobe Distiller or `dvips` -> `ps2pdf` workflow.²
- `aeb_pro.js`: Required by the `aeb_pro`, `thorshammer`, and `docassembly` packages.

In all cases, the JS files must be correctly installed for the above packages for them to perform as designed. Refer to `docs/install_jsfiles.pdf` for installation instructions.

¹Or, any package that uses `insdljs`.

²There is no harm in the routine installation of this file even if you don't use Distiller or `ps2pdf`.

Files of this distribution.

- Root-level folder: `acrotex-js.dtx`, `acrotex-js.ins`, `README.md`
- docs folder: `acrotex-js.pdf` (documentation), `install-jsfile.pdf` (installation instructions, and `acrobat-in-workflow.pdf` (commentary on using Acrobat in your workflow).
- js-files: `aeb.js`, `aeb.pro.js` (These are the JS files to be installed, follow the instructions of `install-jsfile.pdf` in the docs folder.
- js-test: `test_install.pdf` (After installing the JS files, test whether you've understood and following the instructions correctly, open this file in Acrobat and follow instructions contained therein.)
