1 Introduction

This document contains examples of the Lucida OpenType fonts available through TUG. They can be used with any OpenType-aware application, including the Lua \TeX and \XeTeX extensions of \TeX (but not pdf \TeX).

A brief overview:

- Math fonts: Lucida Bright Math and Lucida Bright Math Demi, extended OpenType versions of the original Type 1 Lucida math fonts.
- Three text families (regular, italic, bold, bold italic) also coming from the original Type 1 distribution: Lucida Bright, Lucida Sans, and Lucida Sans Typewriter.
- Three specialized fonts from the original Type 1 distribution: Blackletter, Calligraphy, and Handwriting.
- Two additional monospaced font families (same four variants): Lucida Grande Mono DK and Lucida Console DK. These have O (oh), and Q glyphs modified to a somewhat squarish shape, and the 0 (zero) glyph open rather than slashed, as preferred by Don Knuth. As usual, Lucida ConsoleDK has shorter capitals than Grande Mono, among

[®] Lucida is a trademark of Bigelow & Holmes Inc. registered in the U.S. Patent & Trademark Office and other jurisdictions.

other smaller changes. (If you don't have the DK fonts and want to remake this document as a test, you'll need to remove the references to them.)

The package `lucida-otf` supports all families with specific optional arguments:

<i>name</i>	<i>meaning</i>
RM	Lucida Bright (Roman)
SS	Lucida Sans
TT	Lucida Sans Typewriter
GTT	Lucida GrandeDK
CTT	Lucida ConsoleDK
MM	Lucida Math
MMbold	Lucida Boldmath
BL	Lucida Blackletter
CAL	Lucida Calligraphy
HW	Lucida Handwriting
DefaultFeatures	for all font styles

Except math all fonts are preset with `Scale=0.92`. For this documentation we use instead:

```
\usepackage[TT={Scale=0.88,FakeStretch=0.9},
             SS={Scale=0.9},
             RM={Scale=0.9},
             DefaultFeatures={Ligatures=TeX}]{lucida-otf} % support opentype lucida fonts
```

The standard font families `rm`, `sf`, and `tt` can be used as usual for any L^AT_EX engine. The other specific Lucida fonts can be used by one of the macros `\LucidaBlackletter`, `\LucidaCalligraphy`, `\LucidaHandwriting`, `\LucidaGrandeMonoDK`, and `\LucidaConsoleDK`. They are defined as:

```
% The specialized one-off fonts:
\newfontface\LucidaBlackletter{Lucida Blackletter OT}[\lucidaBL@features]
\newfontface\LucidaCalligraphy{Lucida Calligraphy OT Italic}[\lucidaCAL@features]
\newfontface\LucidaHandwriting{Lucida Handwriting OT Italic}[\lucidaHW@features]
%
% GrandeMono and Console fonts for an example:

\newfontfamily\LucidaGrandeMonoDK{LucidaGrandeMonoDK}[
  \lucidaGrandeTT@features,
  ItalicFont = * Italic,
```

```

        BoldFont = * Bold,
        BoldItalicFont = * Bold Italic
]
%
\newfontfamily\LucidaConsoleDK{LucidaConsoleDK}[%
    \lucidaConsoleTT@features,
        ItalicFont = * Italic,
        BoldFont = * Bold,
        BoldItalicFont = * Bold Italic
]

```

By default the fonts are defined by their symbolic name. As an alternative you can load the package with the option `usefilenames`.

```

\usepackage[usefilenames,
    TT={Scale=0.88,FakeStretch=0.9},
    SS={Scale=0.9},
    RM={Scale=0.9},
    DefaultFeatures={Ligatures=TeX}]{lucida-otf} % support opentype math fonts

```

Then all definitions uses the extension `.otf` and the filename of the fonts:

```

% The specialized one-off fonts:
\newfontface\LucidaBlackletter{LucidaBlackletterOT}[Extension=.otf,\lucidaBL@features]
\newfontface\LucidaCalligraphy{LucidaCalligraphyOT-Italic}[Extension=.otf,\lucidaCAL@features]
\newfontface\LucidaHandwriting{LucidaHandwritingOT-Italic}[Extension=.otf,\lucidaHW@features]
%
% GrandeMono and Console fonts for an example:

\newfontfamily\LucidaGrandeMonoDK{LucidaGrandeMonoDK}[
    Extension = .otf,
    \lucidaGrandeTT@features,
        ItalicFont = *-Italic,
        BoldFont = *-Bold,
        BoldItalicFont = *-BoldItalic
]
%
\newfontfamily\LucidaConsoleDK{LucidaConsoleDK}[%
    Extension = .otf,
    \lucidaConsoleTT@features,
        ItalicFont = *-Italic,
        BoldFont = *-Bold,

```

BoldItalicFont = *-BoldItalic
]

2 Text examples

The basic text family is LucidaBrightOT, with the usual four variants—regular, italic, bold, and bold italic, all with oldstyle figures; small caps are available in the upright shapes:

3 Math examples

Here's some text. And here's some math:

```
\[
\phi(x)=\int_{-\infty}^xe^{-x^2/2}
\]
```

And now bold math:

```
\boldmath
\[
\phi(x)=\int_{-\infty}^xe^{-x^2/2}
\]
\unboldmath
```

Euro and copyright symbols are available: `\texteuro` `\textcopyright`.

Here's some text. And here's some math:

$$\phi(x) = \int_{-\infty}^x e^{-x^2/2}$$

And now bold math:

$$\phi(x) = \int_{-\infty}^x e^{-x^2/2}$$

Euro and copyright symbols are available: € ©.
